## **DETAILED ACTION**

The previous office action is rescinded.

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/21/05 has been entered.

Claims 63, 65-68, and 70-75 are pending.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 63, 65-68 and 70-75 are rejected under 35 U.S.C. 102 (e) as being anticipated by Ingham (USPN 5,844,079).

The claimed invention is drawn to a preparation comprising a sonic hedgehog polypeptide sequence in which the polypeptide is formulated for topical application, and which polypeptide is formulated on a sponge, bandage, dressing, or film.

Art Unit: 1654

Ingham et al. teaches topical preparations comprising sonic hedgehog polypeptides encoded by hedgehog related genes, see e.g., for example, column 3. Ingham teaches the Shh polypeptide can comprise a fragment of at least 50, 100 or 150 amino acids in length within the N-terminal half thereof, see, e.g., for example, column 3. In addition, Ingham discloses hedgehog polypeptides which include Shh sequences corresponding approximately to the natural proteolytic fragments of the hedgehog proteins, such as from about Cys-24 through Glu-188, or from about Asn-189 through Ala-475 of the human Shh protein, or analogous fragments thereto, see, e.g., for example, column 3. Ingham discloses methods of introduction of exogenous hedgehog polypeptides at the site of treatment include hydrogels that can be used to form an implant such as within a gauze ( please note that such an implant reads upon one or more of the instantly claimed formulations- e.g., dressing) for sustained release at a particular target site, see e.g., for example, column 52, lines 42-64.

Therefore, the reference is deemed to anticipate the instant claims above.

Claims 63, 65-68 and 70-75 are rejected under 35 U.S.C. 102(b) as being anticipated by Wang (USPN 6,639,051).

Wang discloses a method of administering an agent of hedgehog polypeptides in which the polypeptide is formulated on a bandage, dressing and the like, containing an appropriate amount of a hedgehog therapeutic, see, e.g., for example, column 57, lines 55-60 and column 58, lines 21-29.

Therefore, the reference is deemed to anticipate the instant claims above.

Application/Control Number: 09/827,110

Art Unit: 1654

Claim Rejections - 35 USC § 103

Page 4

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

Claims 63, 65-68 and 70-75 are rejected under 35 U.S.C. 103 (a) as being unpatentable

by Ingham (USPN 5,844,079) in view of Wang (USPN 6,639,051).

Based upon the beneficial overall teachings provided by Ingham in view of Wang with

respect to hedgehog polypeptides in which the polypeptide is formulated on a bandage, dressing

and the like, if not expressly taught, it would have been obvious to one of ordinary skill in the art

at the time the claimed invention was made to make result effective adjustments in conventional

working parameters thereto (e.g., a topical application of the hedgehog polypeptide formulated

on a bandage, dressing and the like) as a mere matter of judicious selection and routine

optimization.

Thus, the claimed invention as a whole is prima facie obvious over the cited reference,

especially in the absence of evidence to the contrary.

Conclusion

All claims are rejected.
